

Compliance priorities - 2024-25

Bush fire risk mitigation ENSMS

Bush fire risk continues to present the greatest consequence for harm to the people of NSW

Critical infrastructure Licence condition compliance

Critical infrastructure conditions aim to address cyber security risk and overseas threats to electricity infrastructure

Worker safety risk

The electricity supply industry presents numerous and critical health and safety risks to workers.

Public safety Asset management

Assets need to be managed to ensure the long term safety of the network for the public.

Draft compliance priorities - 2025–26

Bush fire risk mitigation

Bush fire risk continues to present the greatest consequence for harm to the people of NSW

Critical Infrastructure Licence condition compliance

Critical infrastructure conditions aim to address cyber security risk and overseas threats to electricity infrastructure

Environmental risk

Networks manage environmental risks and have certain obligations when building, maintaining and operating their networks.

Public lighting Licence condition compliance

Public lighting is provided by the licensed distributors on behalf of the road authorities and mitigates public safety risks on our roads

Draft compliance priorities - 2026–27

Bush fire risk mitigation

Bush fire risk continues to present the greatest consequence for harm to the people of NSW

Critical Infrastructure Licence condition compliance

Critical infrastructure conditions aim to address cyber security risk and overseas threats to electricity infrastructure

Emergent technology

Networks are deploying new technologies such as batteries, SAPS and microgrids, introducing potential new safety risks

Public safety

Networks exist in the public space and interactions with the network present a key risk that network operators must manage.
