Your submission for this review:

The Members and Friends of Birding NSW inc have asked that I submit our opinion on their behalf. We SUPPORT the Sydney Water proposal to capture waste-water run-off from the Aerotropolis development in western Sydney, without necessarily recycling it for human use, but rather store non-potable water to benefit the remnants of a vastly degraded region. Water stored in a series of dams and ponds will allow greening and cooling. Storage ponds can be constructed in such a way that the water can be used to fight fires which have proven to be extreme and will continue to be so. Sincerely Ian Bailey Office of Conservation, Birding NSW inc
