Your submission for this review:

1) The Summary of Proposed Additional Activities does not mention Stormwater/Drainage, yet the Proposed Increase of Costs to Residents has a big hike on Stormwater/Drainage - What is the explanation for this? 2) Why should Proposed Additional Activities of Sewerage Management in a NE sector of the Council district be paid for by increases to residences across the board - Our area paid for our sewerage build/enhancements back in 1990 - why are we now being asked to foot the bill for areas that are probably residential "growth" areas? 3) Why is the Proposed Water Service Increase so large? Water pressure on our side of the street in Kariong is half that of residences on the opposite side of the street. Proposed Increases in Water Service charges is not going to make any improvements for us. 4) Have all the non-active manager roles in the Council's Water Department that were created during the years of excessive hiring been abolished yet? If not, why are residents being asked to foot the bill to keep those roles filled?
