Your submission for this review:

We are already paying 2000 a year for minimum water use and cannot afford more. Existing homes should not be paying the cost of services needed by all the new homes being built by developers in the region. Where is the investment that water nsw should have been making over the last 15 yrs in infrastructure? Why in nsw not raising more taxes from the energy industry? Public infrastructure investment should not be funded by users directly but by taxpayers overall. Please just raise funds via taxing properly. Especially the gas industry. Where do I go when you have raised cost of water so much that I cannot afford to live here and have no choice. We are a captive market. Do not exploit us.
