I believe it is a disgrace that we offer Energy providers a feed in tariff of 5c/kW and they sell that off for up to 50c/kW. On another point, why in this day and age do we have Energy providers charging 75c/day (Ausgrid area) for the Supply Access Charge (SAC) and Essential Energy's SAC of \$1.90/day. At one stage, I had been informed the reason was the vast distances of the country. Today, most of the Solar and Wind Energy production, comes from the country and is sent back to the cities. 4/5 of NSW is Essential/Endeavour Energy, owned by the NSW Govt., it is about time for a review into this sort.
