

The last i heard was that IPart gave the nod to a 34% hike on water and sewer to rate payers. The message just received that it is an ongoing evaluation with a minimum of 2.5% increase. Is that correct. I have been forever complaining about zero kerb and guttering, paying for non-existent Storm Water drainage ( now taken off of our water bills and hidden in the end of year rates notice ). The big explanation was that we are paying for future development of same. The CCC will never put Storm Water drainage in Florida Ave where i reside as the substrate/soils are of a sandy nature and water eventually dissipates after laying about in sheets for some time. If any of my family come down with Japanese Encephalitis i am giving notice that i will sue the CCC to the utmost. I lived with and caught Malaria when i worked in PNG so i know what it is all about. I am also sending on a regular basis to newspapers of the 3rd world effort of the CCC in my area. It is an absolute disgrace and offensive every time we face hikes on anything when we have the bare basics here. Pics demonstrate the magnificent effort of the CCC. This CCC has been the most pathetic council on Earth. They first lost about 4 million then 8 million then a quarter of a BILLION dollars trying to be an Investment Company instead of fixing this █████ we put up with. There should be no more increases at all as the last 10% rate increase turned up on my bills as 22% ( leveling in amalgamation HA HA ). The cops came to my house because i sent an email to the CCC - after reading that █████ said that we would soon forget about the rate hike and that the Council CEO █████ would be getting \$250,000 per year. I was enraged and said i would █████. The cops made me recant the threat and first asked me was i going to do that. I am 72 and can hardly walk with disability so what do you think. Sick of the lot of them, Administrators as well. I have had a gutfull.

Forwarding the same emails and this composite of [REDACTED]

New pics of our road with water over it. Does this give nus a discount on a 34% increase in the price of water. No storm water drains and we have heaps of water. What do i sue if we come down with Japanese encephalitis ? Always heaps of mozzies when it goes back to stagnant sheets of water .

Here are a few pics of our water problems - some during rain and some with sheets of water on the shoulders hiding the potholes. Great for mozzies and Japanese encephalitis. If you impose a 34% cost of water i suggest you get a few tankers and gather it free here. These are the good pics - it does not show it when it's fully over the road . I complained about paying for non-existent Storm Water ( now hidden in the end of year rates notice ). The last rates increase was for 10% but ended up as 22% in my bills. So if you impose a 34% increase and that stays constant which i doubt - it means a total of 56% increase recently ( minimum ). This is a 3rd world effort. Going to send the pics to the local newspapers for all to see but there are worse areas nearby.. [REDACTED]

Why am i paying money for this rubbish ?
