Your submission for this review:

I am thoroughly disappointed that previous governments have failed in their efforts to keep the public water supply updated and reasonably priced in the current climate of high prices. Why should we have to pay for the constant supply issues and degradation of the infrastructure that we are now experiencing. Like the rail and roads, there should be money set aside for maintenance and upgrades to the infrastructure. If I have to budget, and I am a Pensioner, then why cant the government learn to manage. Hold a lottery or something, thats how the Opera House was built and in the early days, hospitals were maintained, after all, we love to bet on 2 cockroaches going up a wall.
