Submission: As an owner in stage 1 of the Beaches development i support what appears as a logical response to a challenging issue due to the simple lack of any sewage infrastructure within kilometers of the township. The use of grey water in many parts of my future property makes total sense rather than using fresh water for tasks like gardening. If i am unable to reuse all waste our house is contributing to the treatment plant, then based on the what can only be described as extremely detailed filtration process, releasing to the environment appears reasonable. The standard of treated water released seems much higher quality than that released to the ocean by my current Sydney property.
