Submission: I support a fair price for solar.

I want the feed-in tariff to increase in line with the wholesale price of electricity.

The feed-in tariff should not just be a benchmark range, it should be regulated so retailers have to offer it as a minimum.

The feed-in tariff should represent the true value of solar, recognising the environmental and health benefits and the network benefits of rooftop solar. My husband and I started off with solar hot water 28years ago and were always very happy with the benefits of reduced electricity bills and the knowledge that we were contributing to lowering greenhouse gas emissions and that is why we installed our roof panels. Our use of solar is lowering greenhouse gas emissions as is the thousands of other solar panelled homes around Australia.

This is worthwhile and should be rewarded and encouraged.
