Submission: MY submission for this review. Use the KISS methodology: Users that install a PV system at their expense should be reimbursed for the same KW of power uploaded to the grid from their bill for the same KW amount, for example if you upload 3KW to the grid and your bill shows 4KW usage then your bill should be reduced by the 3KW you uploaded and the remainder of the bill is paid by the user. If your upload to the grid exceeds your usage then you should be compensated by half of the current KW charged by electricity companies.
