Submission: I believe that to be fair for the people (residential) who have invested in solar panels on their roof they should be able to have a 1 for 1 net feed in tariff. For every kW that is generated they should be able to get that back from the grid. To a certain size maybe 12c/kW is a step in the right direction. This would be a boost for the solar industry again, and would be a good trade until batteries storage systems become affordable.
