Submission: "The government promised lower electricity prices when de-regulating the industry THAT DID NOT HAPPEN.

The Govt encouraged there voters to invest in solar to reduce there bills & ease government investment into the industry. We did.

The government & now doing another back flip of there voters by trying to reduce the input tariff again broken promises that only help cover up the govt poor management & protect the power industry.

If the demand is slowing & wholesale getting cheaper hence the reason you want to reduce feed in tariffs, the WHY aren't our power costs coming down.

Why are the voters who did what the gov't asked, invest in solar not getting the same wholesale price for there feed in power as the main. suppliers.

The reason is, the gov't lied about cheaper power when they sold off the voters power stations.

They conned the voters into investing in power & know are trying to protect the industry for the errors the gov'ts blunders.

can't wait for the next election. especially as the prime minister boasts about in proving power cost but does the opposite, you do not deserve your jobs."
