SOLAR FEED-IN TARIFFS 2017/18

Tuesday, 9 May 2017
10:31:20 AM

As a household with PV on the roof, I support a feed-in tariff that represents the same price that my power supplier pays on average for the electricity they supply us when the sun is not shining. As things stand, if this does not happen, we will simply move to battery technology and route as much of our present feed-in as possible to our own battery array. Since there is clearly a national shortage of power available for purchase with the shutting down (thankfully!) of many coal fired stations, then rewarding my move towards batteries and excluding my supplier from any feed-in at all is the ultimate stupidity on the part of the power companies and the current regime in Canberra. Don't give up your day jobs guys, because you clearly know nothing about strategic, long-term planning and business decisions!
