Submission: "I have just heard that the feed in tariff will be reduced to a ridiculously low rate and I write to register my disapproval of this proposal.

According to our last account, we were charged \$0.538 per kWh for afternoon and evening use and \$0.2446 for use during the rest of the 24 hours. This gives a rough average of 0.40 for the day, making it four times the price at which we receive from the feed-in rate. Why should we pay a much higher rate than we receive? This is not a fair rate. Why can't we continue to have the fair rate which was agreed - at least?"
